## EDUCATION

**National Chengchi University**

BBA in Management Information Systems
Artificial Intelligence Interdisciplinary Micro-Program
Sep 2023 – Present

## EXPERIENCE

**Research Assistant**

Research Projects

- Smart Contract Security and Auditing Mechanism Research
- AI + Quantum Computing (AI+QC) Research and Development Program

Responsibilities

- Assisted with research support and literature review for ongoing projects
- Provided technical and administrative assistance in project implementation
- Supported system development, maintenance, and documentation

## TECHNICAL SKILLS

**Programming**
Python · Java · JavaScript · SQL
**Backend & Systems**
FastAPI · REST API · System Architecture · Database Design
**Artificial Intelligence**
Machine Learning · PyTorch · LLM Applications · Agentic AI
**Blockchain & Security**
Self-Sovereign Identity (SSI) · Decentralized Identifiers (DID) · Verifiable Credentials (VC)
**DevOps & Tools**
Git · GitHub · Linux
**Information Systems**
Business Process Analysis · System Integration · Data Management

## SUMMARY

Management Information Systems student at National Chengchi University with interests in artificial intelligence, information systems, and secure digital identity technologies. Experienced in backend development and system integration through research projects and technical coursework. Led a team in a national digital credential innovation competition, coordinating system development and translating user requirements into technical solutions. Passionate about exploring emerging technologies such as AI systems and digital identity infrastructure, and motivated to continuously learn and apply new technologies in real-world systems.

## COMPETITION

**Digital Credential Scenario Innovation Challenge — Merit Award**
Hosted by Ministry of Digital Affairs, Taiwan
Team Leader

- Defined & Directed: Led team discussions to conceptualize a practical government digital identity scenario with significant real-world deployment potential.
- Architected: Designed the overall system framework for a decentralized identity (SSI) platform, overseeing the integration of VC and DID standards.
- Full-Stack Oversight: Managed backend development and coordinated frontend synchronization to ensure a cohesive and secure user experience.
- Project Governance: Steered the team through the full development lifecycle—from initial requirement analysis and tech stack selection to final system deployment.
- Stakeholder Alignment: Translated complex government infrastructure needs into technical specifications, ensuring cross-institution interoperability.

**Technologies**
Identity Verification · System Design · Self-Sovereign Identity · Security & Encryption · VC · DID
